

# HALL EFFECT CT 6000A HCT019

## Description

The Hall effect current sensor provides strong electrical isolation between the output of the sensor and the current carrying conductor. The output of the sensor reflects the real wave shape of DC, AC and pulsed currents of the primary circuit. The 150 x 40mm window can be opened up by unscrewing the top for ease of installation

## General Specifications

Input Current:	+/- 800 to +/-6000A <sub>dc</sub>
Measurement Output:	+/- 5V <sub>dc</sub>
Response time T <sub>90</sub> :	≤30μS
Accuracy	1%
Linearity error:	< 0.4%
Offset voltage	±20mV
Hysteresis error	±10mV
Output impedance:	100Ω
Minimum output load:	8k2Ω
recommended output load:	≥15kΩ
Zero adjustment:	± 2%
Span adjustment:	± 20%
Temperature drift	≤250ppm/°C
Current consumption	≤25mA
Power Supply:	± 15V <sub>dc</sub> ± 5% regulated
Isolation	3 kV <sub>rms</sub> / 50Hz / min
Overload:	8000A
Operating temperature range	-10°C~+80°C
Storage temperature range	-25°C~85°C
Fire retardancy	UL94-V0

## Application

The HCT019 is designed for use with the DCT247. The DCT247 is a din mounted signal conditioning module for monitoring of DC and true RMS AC currents and provides a standard process signal output or relay contact.
